## **Print Command Selected for Superior Security, Customization**

**Hartland, WI.** Print Command LLC, a global managed print application service provider, announced this week that they were awarded an exclusive Managed Print Services (MPS) arrangement due to their industry-best security and customization capabilities. EZ Office Products (EZOP), South Central Wisconsin's leading office products company, evaluated and tested MPS providers for over a year prior to launching their MPS product ultimately choosing Print Command because their clients told them network security was their top priority.

"Our customers told us that network security was absolutely critical," said Rose Molz, EZOP's President. "Since our business success is based on superior service and strong relationships, we simply weren't willing to trust a MPS partner who couldn't deliver our customer's top priority: security. We looked at and tested everything in the market, but in the end the only choice to give us the capabilities we needed was Print Command."

Also factoring into the decision is Print Command's unique capability to completely customize their application for individual clients. "We love the fact that we don't lose any branding efforts by using Print Command," Molz continued. "The movement from our online store to our MPS is integrated and seamless, so we offer a solution that is truly ours--not just a rebranded Print Fleet or FMAudit like our competitors. We get the best possible solution of security, customization, and price with Print Command."

## **About Print Command LLC**

Print Command offers Value Added Resellers (VAR's) and consultants the most secure and only customizable MPS application in the world. With redundant, Department of Defense-compliant network security protocols, Print Command solves the problem that 98% of end-user clients surveyed said was their primary reason for not using one of the current MPS applications: zero confidence in network security. Furthermore, because Print Command's user interface, reporting capabilities, alert settings, and layout are completely customizable, Print Command is the only MPS application that allows VAR's and consultants to build an individual brand and offer truly differentiated services.

**Print Command isn't just different, it's a revolution.**
